

# Nexus Point of Care Workflow Services for Healthcare

Healthcare organizations are large, complex businesses with unique and challenging operational, regulatory, and compliance requirements.

As part their integrated workflow, providers must manage and retain an extensive, diverse workforce across geographically dispersed regions as well as significant amounts of equipment and infrastructure.

Additionally, they serve large quantities of customers that require customized care based on each patient's personal medical records. Not only must these records be compliant with security and privacy regulations, but they must be available and accessible anytime, anywhere in order to provide the highest level of patient care.

## Point of Care Workflow Services

Nexus' Point of Care Workflow Services help healthcare organizations manage their business operations effectively through the strategic design, deployment, and support of Advanced Technologies from Cisco and other leading technology providers. Benefits include:

- Reduced employee turnover by helping attract, retain, and manage staff
- Maximized utilization and return on investment for equipment capital expenditures
- Increased productivity through real-time access to information and tools at the Point of Care
- Streamline workflow processes through strategic review and design of business processes, i.e. increase efficiency and accuracy of prescription approvals or reduce wait times associated with bed management

## EXTENSION Applications

Core offerings within Nexus' Point of Care Workflow Services include solutions from our strategic partner, EXTENSION, Inc. In conjunction with EXTENSION, Nexus provides core workflow solutions targeting the specific requirements of healthcare organizations:

- **EXTENSION® HealthAlert™ for Cisco** - Provides critical, time sensitive notifications or alerts to healthcare staff through mobile devices or CISCO IP phones.
- **EXTENSION® HealthAgent™ for Cisco** - Integrates your patient interaction system (contact center) with your healthcare data repositories for streamlined access to vital information
- **EXTENSION® HealthPractice™ for Cisco** - Integrates registration system with core operational workflow
- **EXTENSION® HealthLocate™ for Cisco** - Track and locate equipment or other vital assets to minimize response times and maximize staff and equipment utilization
- **EXTENSION® HealthBundle™ for Cisco** - Full suite of tools including EXTENSION Engine which helps organizations create rules and workflows to enhance productivity and address emerging needs
