

Core Foundation Services

Healthcare organizations have unique and challenging business requirements in today's marketplace. Infrastructure and core solutions must be secure, highly available, and resilient to meet compliance requirements as well as care practitioner and customer expectations, and to enable clinical workflow processes. Storage and delivery of electronic medical records, ancillary services and medical images increase the already vital nature of the network infrastructure from the endpoint facilities to the data center. These increased business requirements are compounded by the ongoing pressure to increase patient care, improve efficiencies and lower costs as a result of increased competition, an aging population, and regulatory forces.

Nexus Core Foundation Services

Leveraging our extensive healthcare experience and history of technical excellence, Nexus has developed Core Foundation Services for Healthcare. Designed to help healthcare organizations increase the quality of patient care and improve productivity while meeting the security, availability, and resiliency needs of the healthcare industry, Nexus Core Foundation Services utilize advanced technologies from Cisco and other industry leaders to:

- Enhance the adoption of medical systems through availability
- Allow for access to critical information where needed
- Enable location tracking of resources, patients and providers
- Provide an adaptable service in delivery of biomedical, Medical, Business and customer systems
- Ensure profile-based application performance
- Collapse multiple services portfolios into an adaptable framework
- Enable compliance documentation with audit logging capabilities
