

Distance Care Services

Healthcare payors and providers continually strive to improve the quality of and access to care services. In today's competitive marketplace, providers are also looking for effective ways to grow revenues by reaching farther out into the community with enhanced services. Remote care delivery programs, telemedicine, interpretation services, and specialist consults all lead to improved care, productivity gains and strategic cost reductions.

Increased Quality of Care

Utilizing Nexus Distance Care Services, healthcare organizations can increase availability of quality care by providing specialist access and urgent care services to remote locations in real time. Nexus' Distance Care Services solutions also help organizations expand training to reach broader audiences and more effectively communicate new processes, procedures, and patient treatments, elevating the quality of patient care.

Increased Productivity, Care Provider Efficiency and Profitability

By enhancing real-time collaboration between teams and eliminating travel time associated with serving remote locations, healthcare organizations can reduce the time required to serve patients and increase the productivity of physicians, nurses and staff. In addition to increased productivity, Nexus' Distance Care Services reduces opportunity and travel costs associated with providing in-person healthcare services across multiple locations.

Healthcare Solution Suites

- Telemedicine: connecting your patients with your providers over a distance
- Remote Collaboration: virtual team meetings to collaborate on patient care
- Video Conferencing: enhancing decision making, reducing travel and team building with virtual face-to-face engagements
- Nexus Mobile Video Cart: facilitating remote care delivery, diagnostics and interpretation
