

# Microsoft Assessments for Healthcare

In every organization, lifecycle management of IT is becoming more critical. Nowhere is the demand for awareness and knowledge greater than in the healthcare industry, where the health, security and availability of the network can literally mean the difference between life and death. Nexus Active Directory and Exchange Assessments provide the insight your healthcare organization needs to facilitate and ensure access to clinical information.

## Microsoft Active Directory Assessment/Readiness

Active Directory is the foundation of your organization's entire computing environment; therefore, a proper Active Directory design is essential to ensure a well-functioning network and organization. Our Active Directory assessment service provides a comprehensive analysis of your existing environment and provides detailed recommendations on how to best reduce complexity and the associated costs of managing the wide variety of user and group requirements today and as your organization continues to grow into the future.

## Microsoft Exchange Server Assessment

If your company has decided to migrate to Microsoft Exchange Server 2010, our assessment service provides a comprehensive analysis of your existing Exchange environment and detailed recommendations on how to best reduce the complexity and the associated costs of planning, deploying, and managing the transition.

## Process and Deliverables

Nexus offers Microsoft-certified experts that follow a rigorous, well-established process using industry best practices and procedures to perform a complete assessment:

- Discovery and analysis of existing infrastructure, configuration, and related documentation
- Review and analysis of the structure, configuration, and related documentation for all critical business applications, such as MS Exchange, SQL, Lotus Notes, etc.
- Review and analysis of the current network layout, including internet and WAN configuration and performance.
- Interviews with key IT personnel.
- Generation and delivery of a final report that contains all findings and detailed recommendations, including potential upgrades and migrations of hardware and software. The report also provides details on how to best manage each recommended upgrade or migration and any mitigating circumstances that may affect the overall deployment strategy.
