

Point of Care Workflow Services

Healthcare entities are as complex as the patient base they serve. Patients require custom care based on their individual medical profile. Not only must patient records be compliant with security and privacy regulations, but they must also be available and accessible anytime, anywhere in order to provide the highest level of patient care.

Point of Care Workflow Services

Nexus' point of care workflow services enable healthcare organizations to manage the delivery of information across business and care delivery portfolios. Nexus effectively leverages strategic design, deployment, and support of advanced technologies to deliver enhanced business solutions that:

- Improve patient safety, quality of care, patient experience and clinical outcomes
- Automate role-based workflows with escalation and priority alerts
- Reduce length of stay due to automated lab result notifications and responses
- Increase productivity through real-time access to information at the point of care
- Enable content sharing among physicians/care providers on preferred communication devices

EXTENSION Solution Suite (ESS)

Core offerings within Nexus' point of care workflow services include solutions from strategic partner EXTENSION, INC. In conjunction with EXTENSION, Nexus provides workflow solutions targeting the specific requirements of healthcare organizations:

- **EXTENSION HealthAlert™ for Nurses** – Delivers alerts, messages and time-sensitive notifications to nursing staff
- **EXTENSION HealthAlert™ for Physicians** – Provides critical alerts to highly mobile physicians and clinicians
- **EXTENSION HealthPractice™** – Integrates common communication tools with registration, scheduling and patient data
- **EXTENSION Device Messaging** – Delivers critical information using secure, non-SMS, text-based messages
- **EXTENSION Engine** – Workflow, communication and device integration engine for fast and easy implementation of medical data workflows
