

Today, more than ever, healthcare organizations are searching for a communications partner willing to deliver products, services and support that will meet current and future challenges. These organizations require a partner that has the agility and flexibility to address those unique needs.

Healthcare Resources for Today and Tomorrow

To assist with its focus on the Healthcare Practice, Nexus recently partnered with EXTENSION. EXTENSION is an appliance-based application that marries medical applications and devices with Cisco Unified Communications. This marriage adds value to two of the largest technology investments a hospital or group practice can make into IT – its clinical systems and its telephony systems.

Together with EXTENSION, Nexus will provide solutions that EXTENSION has developed:

- **EXTENSION® HealthAlert™ for Cisco** – provides a means for a physician to receive important clinic event notifications on a mobile device with web browsing capabilities. It also allows medical staff members to receive timely event notifications on their Cisco IP phone.
- **EXTENSION® HealthAgent™ for Cisco** – a tool that is designed to fully integrate with Cisco Unified Contact Center Express or Cisco Unified Contact Center Enterprise. The total solution provides for a more efficient call-handling process by allowing the Cisco Contact Center platform to intelligently interact with healthcare data.
- **EXTENSION® HealthPractice™ for Cisco** – a unique solution that leverages data stored in a medical practice's registration system to improve the operational workflow for patients and providers.
- **EXTENSION® HealthLocate™ for Cisco** – a resource awareness enrichment tool that leverages Cisco Unified Presence and location awareness technologies. EXTENSION's integration with Cisco and RFID technology providers advances the asset tracking process by enhancing communications between assets and the individuals submitting status inquiries.
- **EXTENSION® HealthBundle™ for Cisco** – comprised of the entire EXTENSION Solution Suite (ESS) including the EXTENSION Engine which gives organizations the ultimate freedom and flexibility to create rules and workflows that enhance their staff's productivity as well as address emerging needs.

An Effective Partnership

Nexus offers advanced applications, integration services, collaboration, and workflow automation from leading healthcare application providers based on standard protocols. In cultivating strong and proven relationships with third party application providers who specialize in the healthcare industry, Nexus is able to maximize the ROI and effectiveness of Cisco Unified Communications. The EXTENSION partnership gives its healthcare clients an appliance-based solution that marries medical applications and devices with unified communications systems.
