

Physical Security for Healthcare

Physical security solutions for healthcare require a balancing act between safety and service, quality of care and regulatory compliance. Nexus delivers comprehensive security technology across the intelligent media network, including phones, displays, email and messaging systems, paging, and more, for both local and remote users – any time, anywhere, on any device.

Experience You Can Count On

The Nexus physical security team includes individuals who have achieved the highest levels of accreditation and certification in the Security Industry, with combined experience spanning decades. Recognized by Cisco and other leading manufacturers, our qualified professional engineers are ready to design, deploy, and support these sophisticated and effective network platforms to meet all of your security challenges and requirements.

Our physical security solutions include video surveillance, access control, facilities and asset management, providing benefits for any sized facility:

- Safety and Protection of Patients and Staff
- Protection and Availability of Facilities and Assets
- Industry-wide Compliance and Regulatory Enforcement
- Promote Productivity and Quality of Care
- Unified Asset Visibility (Asset Management & Tracking including Pharmaceutical)
- Visitor and Guest Management

Comprehensive Capabilities

Professional Services: From actual site surveys and risk assessments, to systems design and optimization, to planning and project management services, Nexus has the professional to assist.

Advanced Engineering: Nexus Physical Security engineers have the expertise to deploy efficient and effective Physical Security solutions, including device placement, system design, drafting, network design, and threat assessments.

Deployment and Lifecycle Support: NexusCare Prime Services can provide monitoring and management of the Physical Security devices 24 hours a day, 7 days a week from our network operations center.

Turn Key Solutions: A complete Physical Security solution: consulting services to define the project requirements, engineering services to design the ideal solution, deployment services to expertly install and commission the system, and support services to assure a fully-functional, long lasting investment.
